Genuine Textiles Workshop System: How It Flows

Reference guide for BaCorn Technologies | Covers Phases 1 to 20 | 30/10/2026 | Prototype with mock data, not yet Laravel

1. How to read this guide

The system looks complex because it covers the whole factory. It becomes simple once you see that it is **one main chain** (a customer order from first enquiry to final payment) plus **five side flows** that feed or follow it: stock, expenses, wages, messages, and reports. Section 2 shows the chain on one page. Later sections explain each part. Items marked **OPEN** are still waiting for the owner's answer (see the Owner Questions PDF).

2. The main chain at a glance

1. **Customer** is recorded (with credit terms if approved).
2. **Quotation or Proforma** is drafted, discounted if needed, and issued.
3. **Invoice** is created from it and issued for the full order value.
4. **Receipt** is issued for the 50% deposit.
5. **Order** is created and confirmed. It gets an order number.
6. **Material issue** takes fabric and accessories out of the store for the order.
7. **Production stages** move the order: Received, Deposit confirmed, Cutting, Sewing, Finishing and quality check, Ready for delivery.
8. **Delivery note** is issued when goods leave, whole or in part.
9. **Delivered** is confirmed with the receiver's name, date and quantities.
10. **Final receipt** for the balance closes the invoice.
11. **Reports, cash book and dashboard** update from everything above.

Every step leaves a record (who, when, why), so the history is always visible.

3. Who uses the system

Role	Main work	What they never see
Owner	Final approver: deletions, stock adjustments, payments, expenses, wages, material costs, fabric calculator	Nothing hidden
General Manager	Runs daily work, approves discounts, overrides credit and deposit rules with a reason, receives goods, bulk messages	Owner-only settings
Accountant	Receipts, debtors, reports, cash book, expense records	Cannot compose messages beyond payment reminders
Sales	Customers, quotations, invoices, counter sales, own orders and targets	Other people's sales and targets, costs
Marketing Manager	Campaigns, posters, message templates, lead source report	Targets, payments, debtors, expenses
Store Keeper	Goods received, material issues, finished goods stock, dispatch preparation	Prices, totals, costs, rates, pay, payments
Workshop Supervisor	Order stages, production log, attendance	Prices, totals, costs, rates, pay, payments

The Store Keeper and Workshop Supervisor see no money on any screen or printout, including the dashboard and delivery notes.

4. The sale, step by step

4.1 Customers

A customer has contact details, a lead source (how they heard of you), and optionally a credit limit and credit days. Credit is decided by the General Manager. Default credit is 30 days. Measurements are never kept on the customer; they belong to each order.

4.2 Quotation and proforma

- Start as a **draft**. A draft has no number and can be discarded freely.
- Add lines (description, size, quantity, unit price). VAT of 18% is added on top.
- Any discount needs approval. A Sales discount is a request; the Owner or General Manager approves it before the document can be issued.
- **Issue** assigns the next number and locks the document. A quotation is valid for 14 days; a proforma has no validity line.
- To correct an issued document, duplicate it as a new draft and void the original with a reason.
- Either one converts to an invoice with one click. An expired quotation shows a price warning first.

4.3 Invoice

- Created from a quotation or proforma, or directly, as a draft.
- Issued for the **full order value**. The number continues from the last paper invoice (next is 645).
- If the customer's balance plus this invoice exceeds their credit limit, Sales cannot issue; the Owner or General Manager can, with a written reason.
- The fiscal document number (EFRIS) can be typed in after issue. **OPEN** (A-01).
- Payment status is always calculated: unpaid, part paid or paid. It is never typed in.
- Owner or General Manager can void an invoice, but only after its receipts are handled.

4.4 Receipts

- Every payment gets a receipt, including the deposit. One receipt covers one invoice.
- The amount cannot exceed the invoice balance. Methods: cash, MTN or Airtel Mobile Money (needs a transaction ID), bank (needs a reference), cheque (needs a cheque number).
- A receipt cannot be edited. A mistake is corrected by voiding it with a reason (Owner or General Manager) and issuing a new one.
- One payment covering several invoices, and bounced cheques, are **OPEN** (A-43, A-44).

4.5 Order

- An order starts as an unnumbered draft linked to the customer and invoice. **Confirming** gives it an order number and places it at *Received*.

- It holds the lines, promised delivery date, priority (normal or urgent), and either a size breakdown (bulk school orders) or body measurements (single custom orders).
- Urgent orders show a badge and sort first. There is no extra charge.
- The deposit is met at 50% of the invoice. Until then the order cannot move past *Received*, unless the Owner or General Manager approves it with a reason.
- Confirmed order lines are locked. Changes after confirmation are **OPEN** (A-66).
- Only the Owner or General Manager can cancel, and only before cutting. Cancelling after cutting is **OPEN** (A-62).

4.6 Production

Only the Workshop Supervisor, Owner or General Manager move an order through the stages:

1. Received
2. Deposit confirmed
3. Cutting
4. Sewing
5. Finishing and quality check
6. Ready for delivery (set by hand)
7. Delivered (set automatically, never by hand)

Backward moves and skipped stages need a note. Each move records the person and time. The exact list of steps is **OPEN** (A-02, A-57).

When an order reaches *Ready for delivery*, the system offers to send the customer an SMS. The SMS is simulated: it is logged but not sent.

The Workshop Supervisor can also print a **job card** (A4) with no prices.

4.7 Material for the order

See section 6.2. The order itself never changes stock; the **material issue** does.

4.8 Delivery

- A **delivery note** is created from one issued invoice and gets its number only when issued.
- Partial deliveries are allowed. The system tracks ordered, dispatched, returned and remaining quantity for each line.

- **Dispatch clearance:** goods may leave when the invoice is paid, or when a credit customer is within their limit and has no overdue debt. Otherwise the Owner or General Manager must approve release with a reason.
- Methods: delivered by us, collected by the customer, or courier. Delivery is not charged to the customer.
- **Confirm delivery** with the receiver's name, date and quantity received. Anything returned needs a reason (damaged, wrong size, refused, other).
- The order becomes **Delivered** by itself once every invoice line is fully delivered.
- Delivery notes show no prices or payment amounts.
- Delivery of finished garments taken from ready-made stock is blocked until the owner answers A-78.

4.9 Final payment

The 50% balance is collected on delivery with another receipt. When the invoice balance reaches zero it shows as paid, and the customer's debt disappears.

5. Money flows

5.1 Money in

Every issued receipt, including counter-sale receipts, appears in the **cash book** automatically. Cash, Mobile Money and cheque go in the cash column; bank transfers in the bank column. A voided receipt is never deleted; a dated reversing entry is added.

5.2 Money out: expenses and payment vouchers

1. Anyone allowed records an **expense draft** (category, payee, amount, date, optional photo). A draft has no number.
2. It is **sent**. It now waits for the Owner.
3. The Owner **approves** or **rejects** it with a reason.
4. Approval gives it the next **payment voucher** number (starting at 1) and posts the money out in the cash book.
5. A voucher can be printed on A4. Cancelling an approved expense needs a reason; the voucher keeps its number and shows VOID, and a reversing entry is added.

Categories: rent, electricity, transport, salaries, materials, repairs, airtime, marketing, lunch, drinking water, allowances. Approval and payment are currently one step (**OPEN**, question 24).

5.3 Opening balances

Books start on **01/01/2027**. Until the owner gives opening cash and bank balances (A-88), the monthly statement shows money in and out only and marks opening and closing balances as pending.

5.4 Dashboard

The dashboard is the first page after login. Each role sees only its own figures, and each figure links to the page it comes from. "Money in" counts each receipt once. "Money out" counts approved expenses less cancellations.

6. Stock flows

6.1 Buying and receiving (Goods Received Note)

Buying happens first and is recorded later; there are no purchase orders. The General Manager (or someone appointed) checks quantity, quality, damage and colour. A failed check marks the note **Discrepancy**, requires notes, and creates a supplier notice message as a draft. Only accepted quantity (received minus rejected) raises stock. Posted notes lock; only the Owner can void one, and only if the goods have not already been used.

6.2 Material issue to production

1. Workshop Supervisor, Owner, General Manager or Store Keeper **requests** material for one active order. No stock changes yet.
2. Store Keeper, Owner or General Manager **issues** it. The issue gets a number, and stock goes down. Stock can never go below zero.
3. Unused material can be **returned** against that issue.
4. Only the Owner or General Manager can void an issue, and only before any return.

The issue note prints on A4 with no costs. Whether stock should drop at the same moment and who must approve are **OPEN** (A-65, A-68, A-79).

6.3 Finished garments in stock

Ready-made garments are counted by product, size, colour and location. Stock rises through opening stock, goods made in production, and transfers between the two locations. Making garments for stock uses a production order with no customer; the remaining ordered quantity can be received once it is Ready for delivery. Transfers move stock out of one location and into the other in one step and cannot take stock below zero.

6.4 Counter sales

A walk-in buyer's garments are sold from the cashier's own location. The sale can have several items, adds VAT, needs approval for any discount, shows change due, and prints an A4 receipt continuing the normal receipt numbers. Stock reduces at once. A sale is cancelled by request with a reason and the Owner approves; the garments return to stock and the receipt leaves the day's takings.

6.5 Corrections

Stock is never edited directly. A stock adjustment is requested by the General Manager or Store Keeper and approved only by the Owner, who also rechecks the balance. Every change is stored as a movement (who, when, why, before, after).

6.6 Low stock

An item is **Out** at zero and **Low** at 25% or less of its full stock level. Until the owner sets full levels, the full level is the biggest quantity received in one delivery.

7. People and wages

1. The **employee register** holds name, phone, NIN, next of kin, role, pay type and rate. NIN, phone and next of kin are for Owner and General Manager only.
2. The Workshop Supervisor records **attendance** and the **production log** (pieces done, by garment and task), plus quality notes. A warning appears when logged pieces exceed the ordered quantity.
3. Targets and **gross pay summaries** are calculated: fixed monthly salary, or pieces times the rate.
4. **Finalising a month** locks its attendance and production entries and creates one **pending Salaries expense**.

5. The Owner approves that expense through the normal expense flow, which gives it a voucher number and posts the money out.

No NSSF or PAYE is deducted yet, and absence, lateness and rework do not change pay. Part-month salaries, piece rates, who finalises and the funding account are **OPEN** (A-91 to A-95). The Workshop Supervisor never sees rates or pay.

8. Debtors, reminders and messages

8.1 Debtors

A debtor is any customer who owes money. Ageing groups each open invoice by age: 0 to 30, 31 to 60, 61 and above days. An invoice is overdue the day after its due date while a balance remains. The debtors report shows the balance as at today.

8.2 Reminders

- Only customers with an overdue balance can be reminded by SMS or email (both simulated and logged).
- A second reminder within 7 days needs a General Manager override with a reason.
- A customer may give a **payment promise**: it is kept when receipts after the reminder reach the promised amount, otherwise missed after its date.
- A **statement of account** (demand letter) can be issued from selected open invoices and voided, never deleted.

8.3 Messages and posters

- **Templates:** order ready, payment reminder, promotion, thank-you, new designs, supplier notice. Marketing Manager edits wait for Owner or General Manager approval.
- **Compose:** choose SMS, email or WhatsApp, a customer or a group, a template, then preview and send. Everything is simulated and logged.
- **Bulk sending** is for the General Manager and Owner. Customers contacted in the last 7 days, inactive customers and customers with no phone or email are skipped and listed with the reason.
- **Poster Studio:** promotion, price list and event posters in WhatsApp, Instagram or Facebook sizes, with an A4 print. Prices on a poster are typed by hand (A-105).
- No real SMS, email or WhatsApp is sent anywhere in the prototype.

9. Reports, targets and marketing

Area	What it shows	Who sees it
Sales report	Sales by period, best customers, best-selling items, sales by employee	Owner, General Manager, Accountant
Debtors report	Balances and ageing as at today	Owner, General Manager, Accountant
Stock report	Quantities only (no money for Store Keeper and Workshop Supervisor)	Owner, General Manager, Accountant, Store Keeper, Workshop Supervisor
Monthly statement	Cash-book style money in, money out and movement, with reconciliation	Owner, General Manager, Accountant
Sales targets	Target, actual, percentage and status per salesperson per month	Owner and General Manager set; Accountant reads; Sales sees own
Campaigns	Planned budget and typed results (leads, orders, sales)	Marketing Manager manages; Owner and General Manager view
Lead source report	Customers and invoiced value by source	Per role rules (A-110)

A target's "actual" comes from issued, non-void invoices by invoice date and the person who issued them. It matches the Sales report for the same person and month. Counter sales and receipts are not included.

All reports print on A4 as unnumbered reports on the shared letterhead.

10. Fabric calculator (Owner only)

The calculator works from editable tables and shows each step:

1. Base metres for the garment and size at the 60 inch reference width.
2. Adjustment for the fabric width.
3. Style add-ons (long sleeves, pleats, lining).
4. Wastage for that design.

5. Times the quantity.
6. Material cost = metres times the fabric's cost per metre.
7. Suggested price = cost plus markup.

The only real example is the owner's large sleeved shirt on 60 inch cloth: 1.5 m plus 0.10 m = **1.6 m**. All other figures, and the 30% markup, are marked as illustrations until the owner confirms (A-96 to A-100). It can check fabric on hand across both locations but never reserves or posts stock, and a saved calculation is a note with no number.

11. Documents and numbers

Document	Numbering	When the number is given	Notes
Quotation	Continues from 098 (next 099)	On issue	14-day validity
Proforma	Continues from 096 (next 097)	On issue	No validity line
Invoice	Continues from 644 (next 645)	On issue	Full value, VAT 18%
Receipt	Continues from 2073 (next 2074)	On save	Locked, void to correct
Delivery note	Continues from 2055 (next 2056)	On issue	No money shown
Order	Starts at 1 (last paper number unknown)	On confirmation	Keeps number if cancelled
Goods received note	Own series	On posting	Void keeps number
Material issue	Own series	On issue	No money shown
Payment voucher	Starts at 1	On Owner approval	Void keeps number
Statement of account, job card, reports	None		Unnumbered

A number is never reused. Drafts use no number. Every printed document is A4 with the shared letterhead from Business Settings and a VOID watermark when cancelled.

12. Approvals cheat sheet

Action	Who approves
Discount on a quotation, proforma or invoice	Owner or General Manager
Issue above a customer's credit limit	Owner or General Manager, with reason
Order past Received before 50% deposit	Owner or General Manager, with reason
Dispatch when not cleared	Owner or General Manager, with reason
Void a receipt or invoice	Owner or General Manager, with reason
Second reminder within 7 days	General Manager override, with reason
Expense and payment voucher	Owner
Stock adjustment (finished goods or materials)	Owner
Cancel a counter sale	Owner
Void a goods received note	Owner
Message template change by Marketing Manager	Owner or General Manager
Salaries expense after month close	Owner

13. Two walkthroughs

13.1 School uniform order

1. Sales records the school as a customer with credit terms approved by the General Manager.
2. Sales drafts a quotation with sizes and quantities. The General Manager approves a discount, and the quotation is issued as 099.
3. The school accepts. Sales converts it to an invoice, which is issued as 645.
4. The school pays 50%. The accountant issues receipt 2074.
5. The order is created and confirmed (order 1) and moves to *Deposit confirmed*.

6. The Workshop Supervisor requests fabric; the Store Keeper issues it. Stock drops.
7. The Supervisor moves the order through Cutting, Sewing and Finishing, logging production pieces as the workers finish.
8. The order is marked *Ready for delivery*; a simulated SMS is offered.
9. The Store Keeper prepares a delivery note. Dispatch is cleared because the school is within credit. The note is issued and goods leave.
10. The school signs; the delivery is confirmed and the order becomes Delivered.
11. The school pays the balance and receives another receipt. The invoice shows paid.

13.2 Walk-in counter sale

1. The cashier opens a counter sale at their location and picks ready-made garments by size and colour.
2. VAT is added; any discount needs approval.
3. Payment is taken, change due is shown, and an A4 receipt prints with the next receipt number.
4. Stock at that location reduces and the receipt appears in the day's takings and the cash book.

14. What exists and what is still waiting

Built (Phases 1 to 20): customers, quotations, proformas, invoices, receipts, debtors and reminders, orders and production, delivery notes, stock, goods received, material issues, finished goods and counter sales, expenses and payment vouchers, cash book and dashboard, reports and monthly statement, employees, attendance and wages, fabric calculator, messages and posters, campaigns, lead sources and sales targets.

Waiting on the owner: order steps and numbers, opening balances at 01/01/2027, wage rules, fabric calculator figures, locations, EFRIS, cheques and multi-invoice payments, delivery from ready-made stock (A-78), message and campaign rules.

Not built: real SMS, email or WhatsApp delivery, EFRIS, commission or bonus, full income statement and balance sheet, customer portal, and the Laravel conversion.

Remember: everything in the prototype uses fake mock data. No customer data should be used until go-live.
